

# University Data Policies and Data Services

Kristin Briney [University of Wisconsin – Milwaukee]

Abigail Goben [University of Illinois at Chicago]

Lisa Zilinski [Carnegie Mellon University]

Ask Yourself These Questions

# Ask Yourself These Questions

- Who owns your data?

# Ask Yourself These Questions

- Who owns your data?
- How long should you keep your data after the end of a project?

# Ask Yourself These Questions

- Who owns your data?
- How long should you keep your data after the end of a project?
- What happens to your data when you leave your institution?

# Ask Yourself These Questions

- Who owns your data?
- How long should you keep your data after the end of a project?
- What happens to your data when you leave your institution?
- Who can you go to locally to get help in this area?

These Are Important Questions

# These Are Important Questions

But they don't always have clear answers

How are universities  
supporting research data  
management?

# Support Systems Examined

- Library data services
  - Data services
  - Data librarian
  - Institutional repository accepting data
  - Data repository
- University data policy
  - Type of policy
  - Policy contents

Which types of universities  
support data better?

# University Metrics

- Carnegie Classification
- ARL membership
- Research expenditure
- Faculty size
- Student population
- Public/private

Study methods

# Methods

- 206 US-based universities
  - Carnegie “Very High” or “High” classification
- Student assistants gathered basic information on universities
  - Cleaned and grouped for easier analysis
- Reviewed library website for services
- Searched for publicly available data policy
  - Keyword search on university websites
- Coded policies by content and type

# Categories of Data

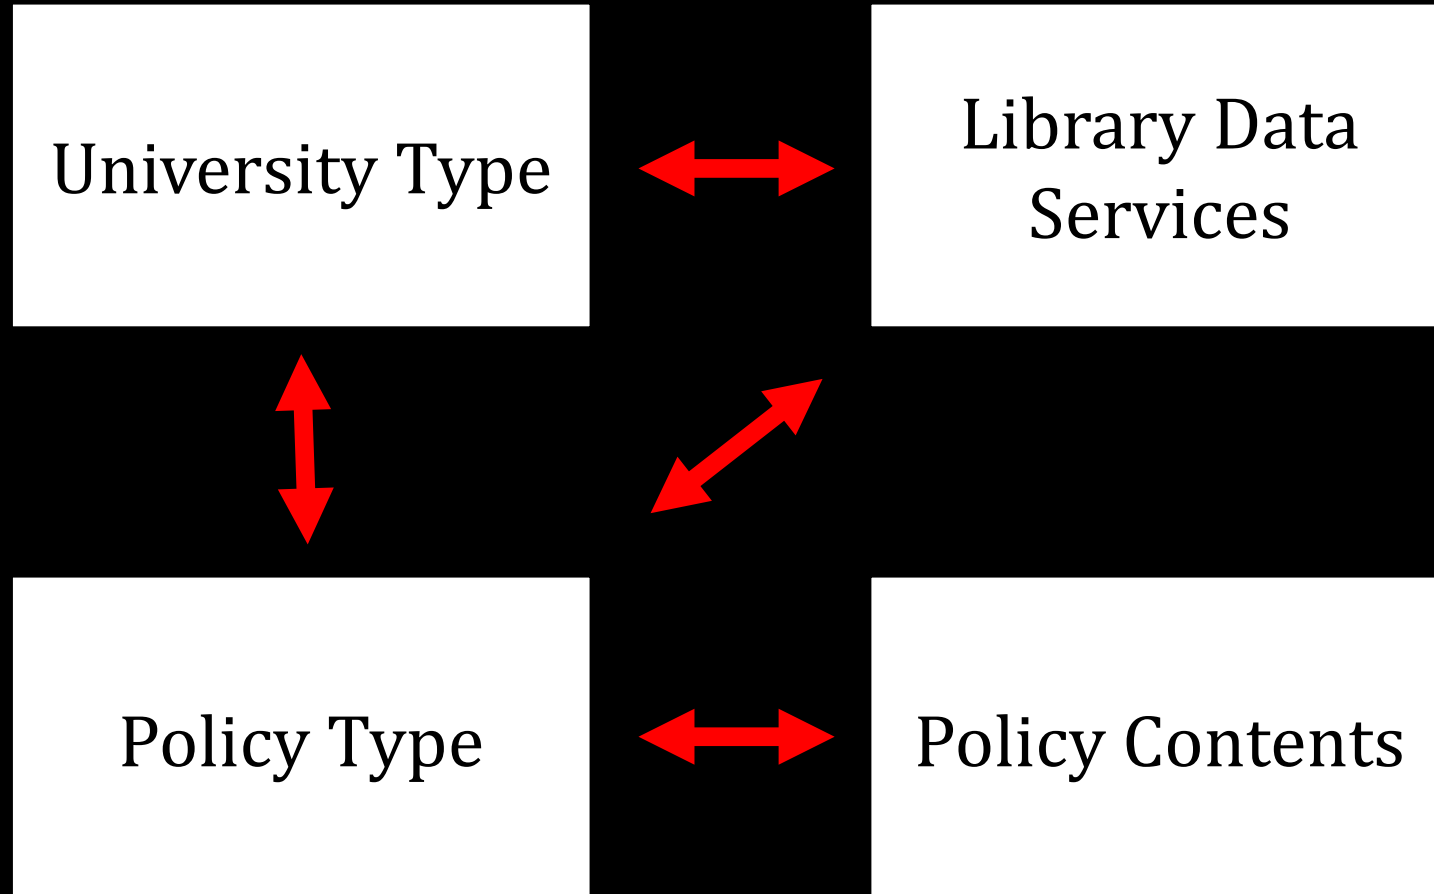

University Type

Library Data  
Services

Policy Type

Policy Contents

# Correlations

# Results

University Type

Library Data  
Services

Policy Type

Policy Contents

# Library Data Services

Library Service	Total	%
Data Services	104	50%
Data Librarian	77	37%
Data Repository	23	11%
Institutional Repository	119	58%
Repository (Either Type)	133	65%

# Library Data Services

- Numbers increased since Tenopir et al. study in 2012
  - >20% data services
  - <10% data librarians
- Repositories
  - Small number of data repositories
  - Large number of IRs accepting data
    - Even more than have data services

University Type

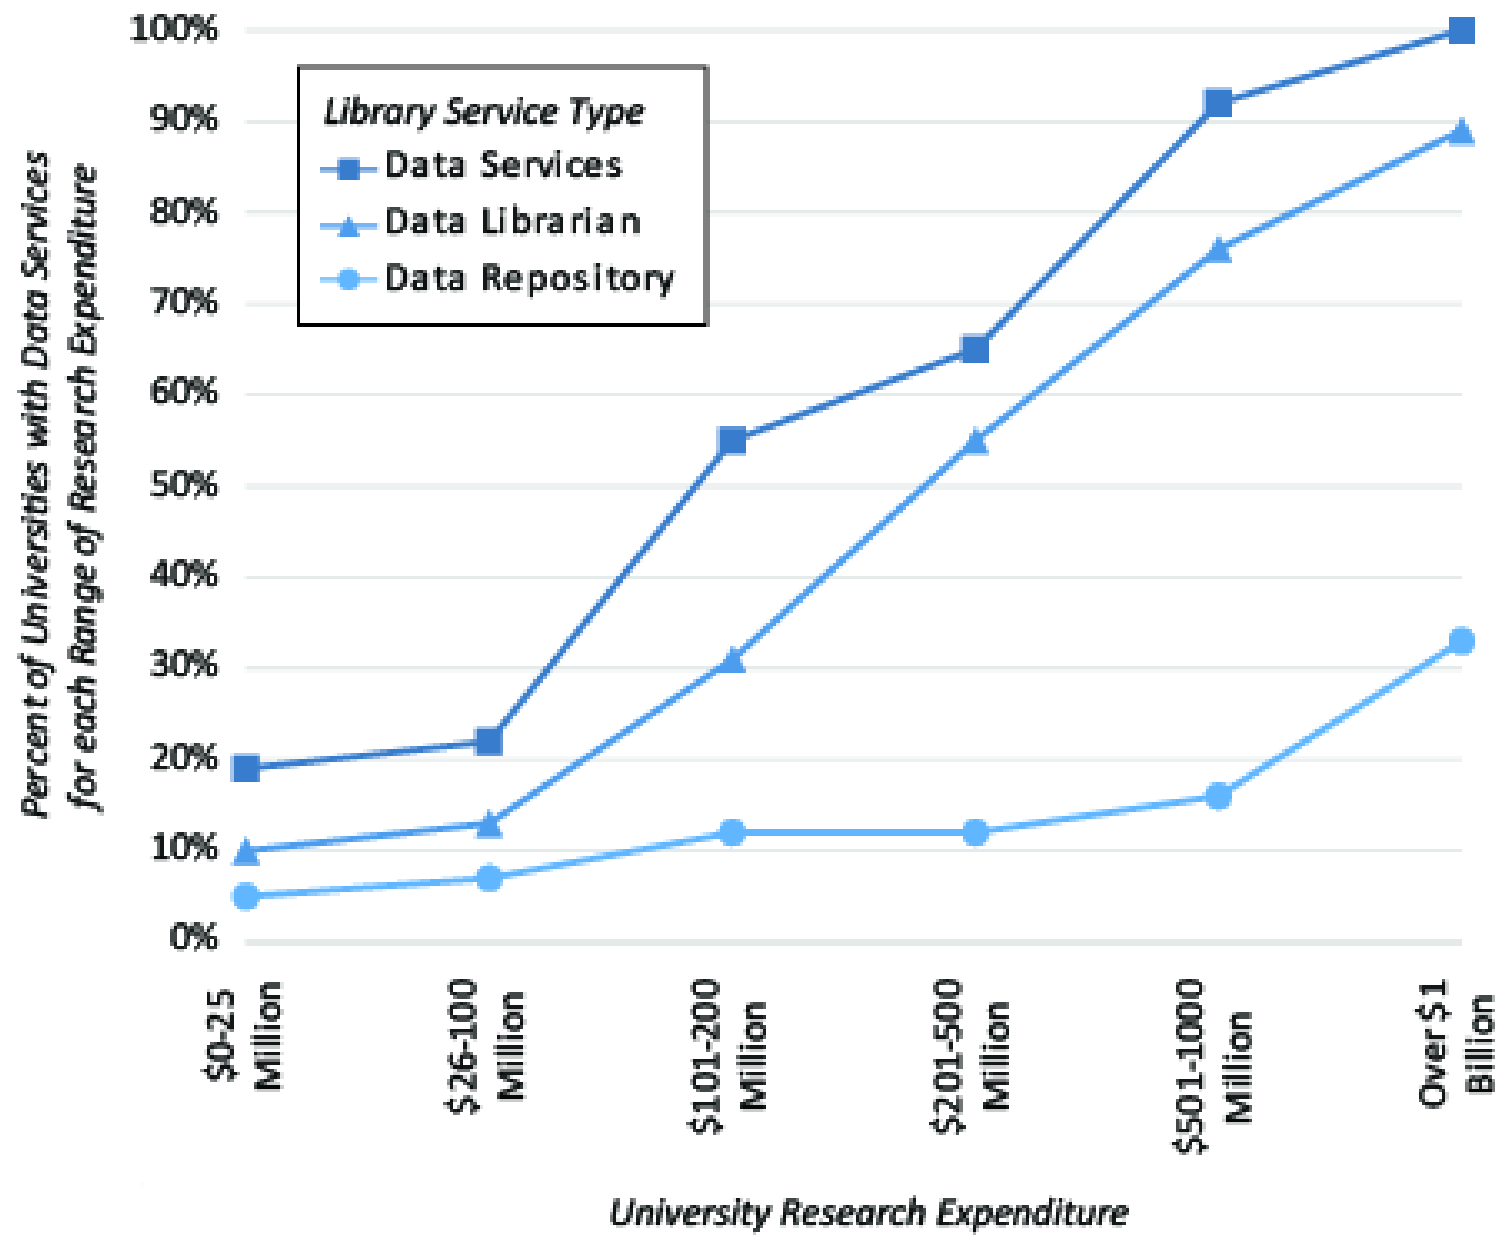

Library Data  
Services

Policy Type

Policy Contents

# Basic data management support

- Universities with more research offer more data services
  - Higher Carnegie Classification
  - ARL membership
  - Higher research expenditure
  - Larger faculty size
- Services saturated at top research levels
  - Will it soon be expected for all academic research libraries to provide data services?

University Type

Library Data  
Services

Policy Type

Policy Contents

# University Data Policies

Policy Type	Total	%
Has Data Policy	90	44%
Data Under IP Policy	30	15%
Standalone Data Policy	60	29%

# University Data Policies

- Difference since DataRes project (2013)
  - 18% existence of [standalone] policy
  - Difference in study method but at least some is likely growth

University Type

Library Data  
Services

Policy Type

Policy Contents

# Data Policy

- Universities with more research more like to have a standalone data policy
  - Higher Carnegie Classification
  - ARL membership
  - Higher research expenditure
- No significant difference for data falling under an IP policy

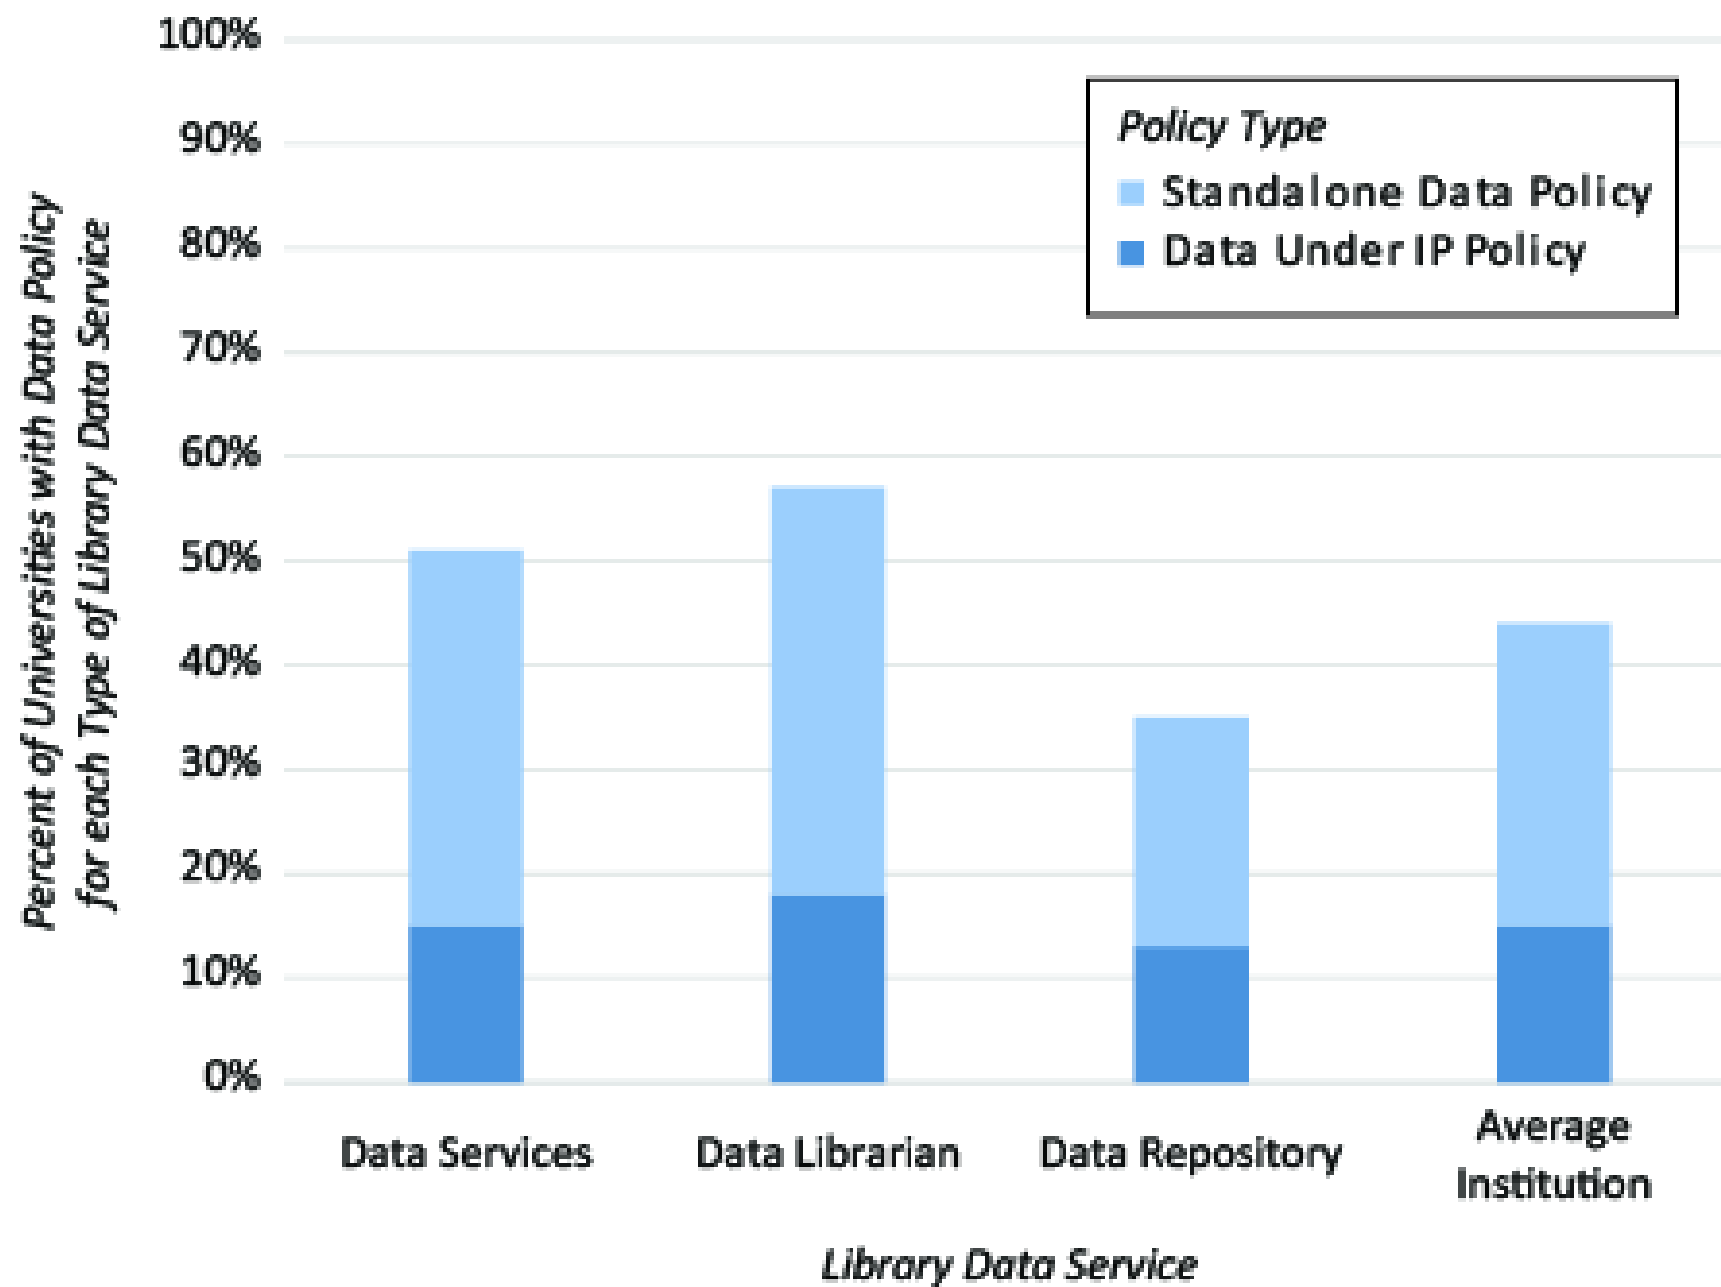

University Type

Library Data  
Services

Policy Type

Policy Contents

# Data Services and Policy

- Universities with data services or a data librarian are more likely to have standalone data policy
  - Data repository numbers too small to find significant difference
- No significant difference for data falling under an IP policy
- Could there be a link between the growth in data services and the growth in standalone data policy?

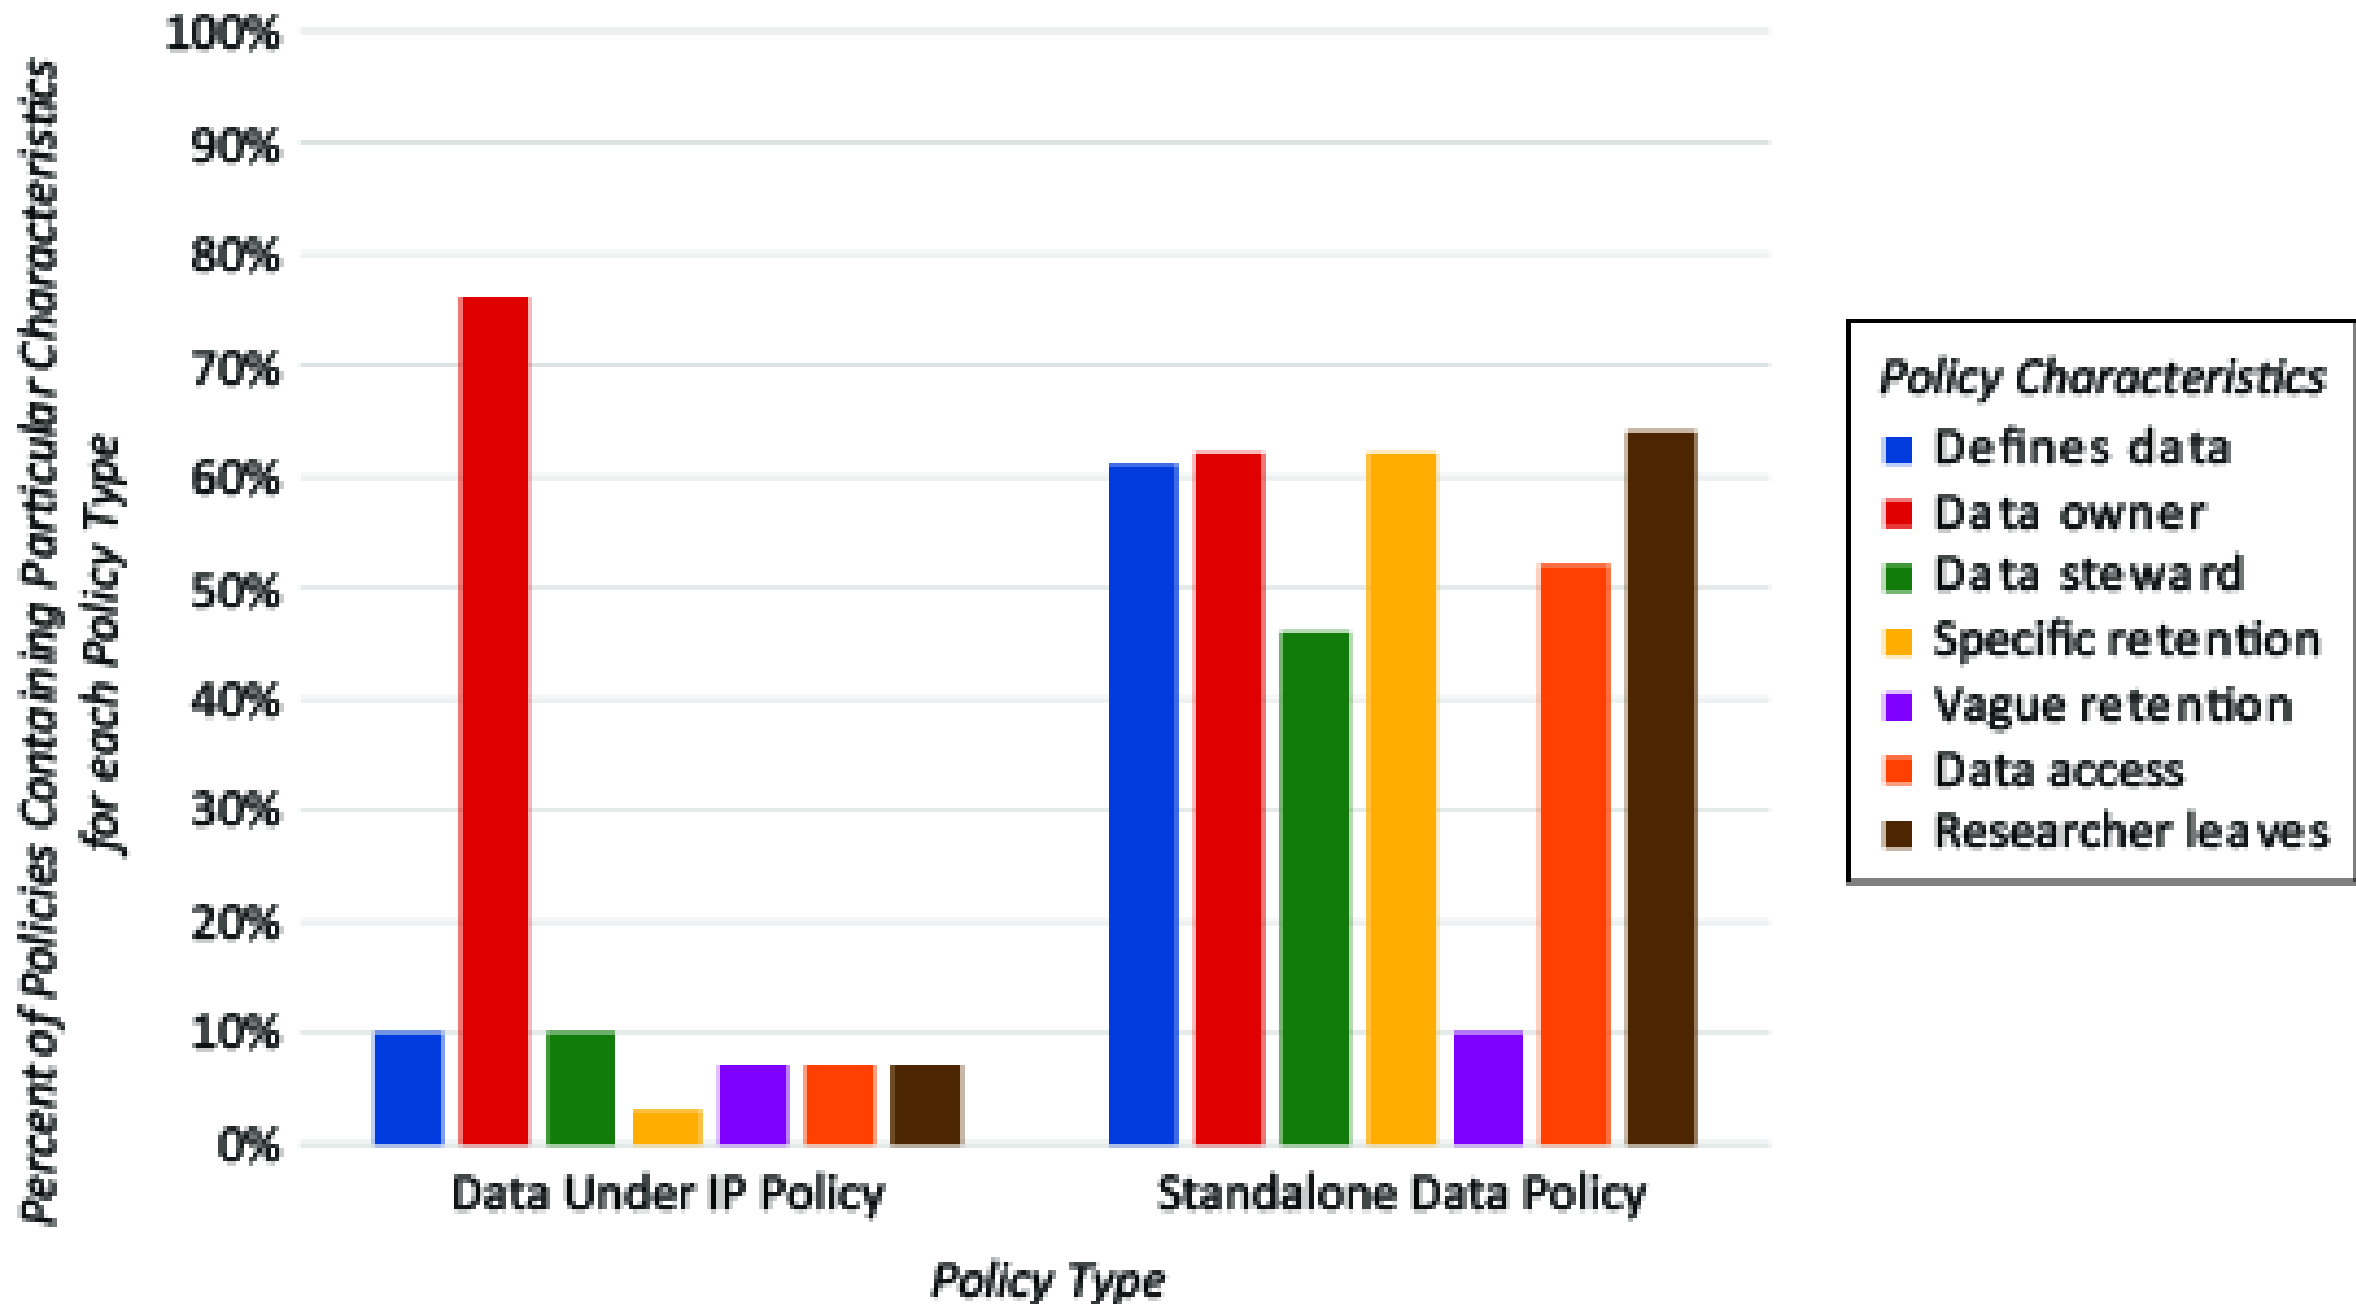

University Type

Library Data  
Services

Policy Type

Policy Contents

# Policy Contents

- Universities focus on legal repercussions of research data
  - IP policies covering data are concerned with data ownership
  - Standalone policies cover access, retention, separation, etc.
- Difference in institutional data policy contents and funder data policy contents
  - NIH focuses on data sharing and NSF on disseminating results (DataRes)
- More analysis to do here

Conclusions

# Conclusions

- Recent growth in both data services and data policy
  - This is coming from the top, so will there be an expectation for libraries at all research universities to have services in this area?
  - Is there a correlation?
- More likely to have a standalone data policy if
  - University conducts more research
  - Library has data services or a data librarian

# How are Universities Supporting Research Data Management?

- Universities' significant concern is ownership and legal issues
  - Provide important clarity where policies exist
- Libraries doing increasingly more data support
  - Librarians have a role in policy development

Thanks!
